Lecture-1&2 (date-13,14)

1.what is Program?

<u>Ans</u>. Program is a set of instructions which we pass to the computer to done the particular task.

- 2.types of programming language:
- 1.low level language---0 and 1(binary/machine language)
- 2.intermidiate level language (assembly level language)
- 3.high level language

- 3.translators:
- 1.compiler---c,c++,sql,pl/sql.
- 2.interpreter---python, javascript.
- 3.assembler---compiler+interpreter

- 4.types of software:
- 1.system software(basic task)
- os, device drivers
- 2.application software(particular task)
- vlc,antivirus,music player
- 3.utility software
- 1.cam(computer aided manufacturing)
- 2.cad(computer aided designing)

```
>Html,css,javascript,react.js
Backend -- > Python /java/php/.net
Mern stack -- > Mongodb, express, react.js, node.js
Mean stack -- > mongodb, express, Angular, node. js
Application
Android -- > Android studio
los -- > los
Hybrid -- > Flutter + React Native
Python -- > Django /flask
Java -- > spring,boot,hibernet,serverless
Php --> Laravel
https:www.amazon.in
security, address, domain
http/https--- hyper text transfer protocol
ftp—file transfer protocol
tcp/udp-->
```

<u>lecture</u>-3 (date-15)

Sdlc(software development life cycle)

- 1.planning
- 2.analysis
- 3.design
- 4.implementation
- 5.testing
- 6.deployment
- 7.maintenance

Dfd(data flow diagram)

Flowchart

- 1.rounded corner rectangle-start/end
- 2.rectangle –process
- 3.diamond---decision
- 4.parallelogram-input/output
- 5.arrow-flow of control

Usecase diagram

Ascii(American standard code for information interchange)

Char -- dec - bin

 $A - Z \rightarrow 65 - 90$

a-z →97-122

 $0-9 \rightarrow 48-57$

```
A - 65 --
tops@123--password
                      Lecture-5 (date-17)
C \rightarrow 1972
C \rightarrow compiler
C \rightarrow pop (procedure oriented programming language)
C \rightarrow linux
Data types:
1.premitive data types/primary data types
i.int \rightarrow 101 102 3 ---- -32768 to 32767
ii. long int→
iii. char → A,$,#,%
iv. float → 45.21,48.32 ---- maximux 6 digit after point
v. double → 7 digit
2.non primitive data types
 i.derived data types
 --(afp) → array, function, pointer
ii.user defined data types
---structure, union
```

 1.first character should be alphabet or underscore. 2.should not contain any special character. 3.it is case sensitive. 4.should not be any keyword. Formatting for premative data types 1.int → %d/%i 2.long int →%ld 3. float → %f 4.double →%lf 	 1.first character should be alphabet or underscore. 2.should not contain any special character. 3.it is case sensitive. 4.should not be any keyword. Formatting for premative data types 1.int → %d/%i 2.long int →%ld 3. float → %f 4.double →%lf 	 1.first character should be alphabet or underscore. 2.should not contain any special character. 3.it is case sensitive. 4.should not be any keyword. Formatting for premative data types 1.int → %d/%i 2.long int →%ld 3. float → %f 4.double →%lf 	
1.first character should be alphabet or underscore. 2.should not contain any special character . 3.it is case sensitive. 4.should not be any keyword. Formatting for premative data types 1.int → %d/%i 2.long int → %ld 3. float → %f 4.double → %lf 5.char→%c	 2.should not contain any special character. 3.it is case sensitive. 4.should not be any keyword. Formatting for premative data types 1.int → %d/%i 2.long int →%ld 3. float -> %f 4.double →%lf 	 2.should not contain any special character. 3.it is case sensitive. 4.should not be any keyword. Formatting for premative data types 1.int → %d/%i 2.long int →%ld 3. float -> %f 4.double →%lf 	Rules for varible declaration
 3.it is case sensitive. 4.should not be any keyword. Formatting for premative data types 1.int → %d/%i 2.long int →%ld 3. float -> %f 4.double →%lf 	 3.it is case sensitive. 4.should not be any keyword. Formatting for premative data types 1.int → %d/%i 2.long int →%ld 3. float -> %f 4.double →%lf 	 3.it is case sensitive. 4.should not be any keyword. Formatting for premative data types 1.int → %d/%i 2.long int →%ld 3. float -> %f 4.double →%lf 	1.first character should be alphabet or underscore.
4.should not be any keyword. Formatting for premative data types 1.int → %d/%i 2.long int →%ld 3. float -> %f 4.double →%lf	4.should not be any keyword. Formatting for premative data types 1.int → %d/%i 2.long int → %ld 3. float -> %f 4.double → %lf	4.should not be any keyword. Formatting for premative data types 1.int → %d/%i 2.long int → %ld 3. float -> %f 4.double → %lf	2.should not contain any special character.
Formatting for premative data types 1.int → %d/%i 2.long int → %ld 3. float -> %f 4.double → %lf	Formatting for premative data types 1.int → %d/%i 2.long int → %ld 3. float -> %f 4.double → %lf	Formatting for premative data types 1.int → %d/%i 2.long int → %ld 3. float -> %f 4.double → %lf	3.it is case sensitive.
 1.int → %d/%i 2.long int → %ld 3. float -> %f 4.double → %lf 	 1.int → %d/%i 2.long int → %ld 3. float -> %f 4.double → %lf 	 1.int → %d/%i 2.long int → %ld 3. float -> %f 4.double → %lf 	4.should not be any keyword.
2.long int →%ld 3. float -> %f 4.double →%lf	2.long int → %ld 3. float -> %f 4.double → %lf	2.long int →%ld 3. float -> %f 4.double →%lf	Formatting for premative data types
3. float → %f 4.double → %lf	3. float → %f 4.double → %lf	3. float → %f 4.double → %lf	1.int → %d/%i
4.double →%lf	4.double →%If	4.double →%If	2.long int →%ld
			3. float -> %f
5.char→%c 	5.char→%c 	5.char→%c 	4.double →%lf
			5.char→%c

Lecture -6&7 (date-19,20)

Tokens:

- 1.keywords-32 keywords
- 2.identifiers- variable (value should be change in program)
- 3.special symbol(bracket)
- 4.string
- 5.constants (value should not be change in program)
- 6.operators
 - 1.arithmetic operator ---> +,-,*,/,%
 - 2.assignment operator \rightarrow =
 - 3.comparison operator \rightarrow ==,<=,>=,<,>,!=

Example

A = 10

B = 20

operator	result	Output	
A==b	false	0	
A!=b	true	1	Type
A<=b	true	1	casting flow:
A <b< td=""><td>true</td><td>1</td><td>1.impici</td></b<>	true	1	1.impici
a>=b	false	0	2.explic
A>b	false	0	Int – Ion

int – float --- char

4.increment/decrement operator:

```
1.pre increment \rightarrow++a
   2.post increment → a++
   3.pre decrement →--a
   4.post decrement →a—
5.logical operator:&&(and), | | (or),!(not)
i.and\rightarrow
true && true—true
true&&false—false
false&&true—false
false&&false—false
ii.or→
true||true—true
true||false-true
false||true-true
false||false—false
6.bitwise operator \rightarrow & (and), | (or)
7.sizeof operator
8.special operator(?-ternary operator)true:false
```

<u>Lecture</u> -8,9,10,11,12 (date-21,22,24,26,27)

Conditional statement
Switch statement
Goto statement
1.simple ifelse
2.ladder if else
3.nested if else
Looping statement
1.entry control loops
i.for loop
ii.while loop
2.exit controlled loops
a.do while loop
1.initialization(one time)
2.condition
3.code
4.counter control

Primeજો નંબર માત્ર પોતાના તથા 1 થી ભાગી શકાય

factorialનંબર ને 1 થી લઈ નંબર સુધી ગુણવાનો

Strongયુઝરે આપેલ નંબર ના દરેક ડિજિટના factorial નો સરવાડો એ સરખા હોય

Armstrongયુઝરે આપેલ નંબર ના દરેક ડિજિટના power નો સરવાડો એ સરખા હોય

Perfect-જે નંબર ને ભાગી શકતા તેનો શેષ 0 મડે એવા ડિજિટ નો સરવાડો નંબર સમાન હોય

Palindrome-નંબર નો રિવર્સ નંબર જ હોય

Fibonacci series-આગડના બે ડિજિટ નો સરવાડો

```
Lecture -13,14,15,16,17,18(date-28,29,30,31,3,4)
→ Pattens:
  i.Squre.
  ii.Piramid.
  iii.Tringle.
→1.premetive data types(limited only one number at a time)
   --int
   --float
   --char
→2.non-premitive data type:
   i. Derived data type:
    --array,function,pointer.
   ii.user defined data type:
    --structure, union
 → Array :-
  - Array store multiple element of same data type.
  - Two type of array:-
      i.single dimension array.(1d array)
      Ex-
      Int roll[5]=\{1,2,3,4,5\};
      Printf("%d",roll[3]);
      Ii.multi dimension array.(2d array)
```

→Rules of Array:-
 Array Index start with 0. Last index number = num-1. Continues memory location.
Lecture 16 - Test
→ Mostly Asked Questions in Single Dimension Array:
- 1.Searching:-
- i.index
- ii.element
- 2.Sorting:-
i.Ascending.li.Decending.
Minimum and Maximum value find in sorted and un sorted Array.

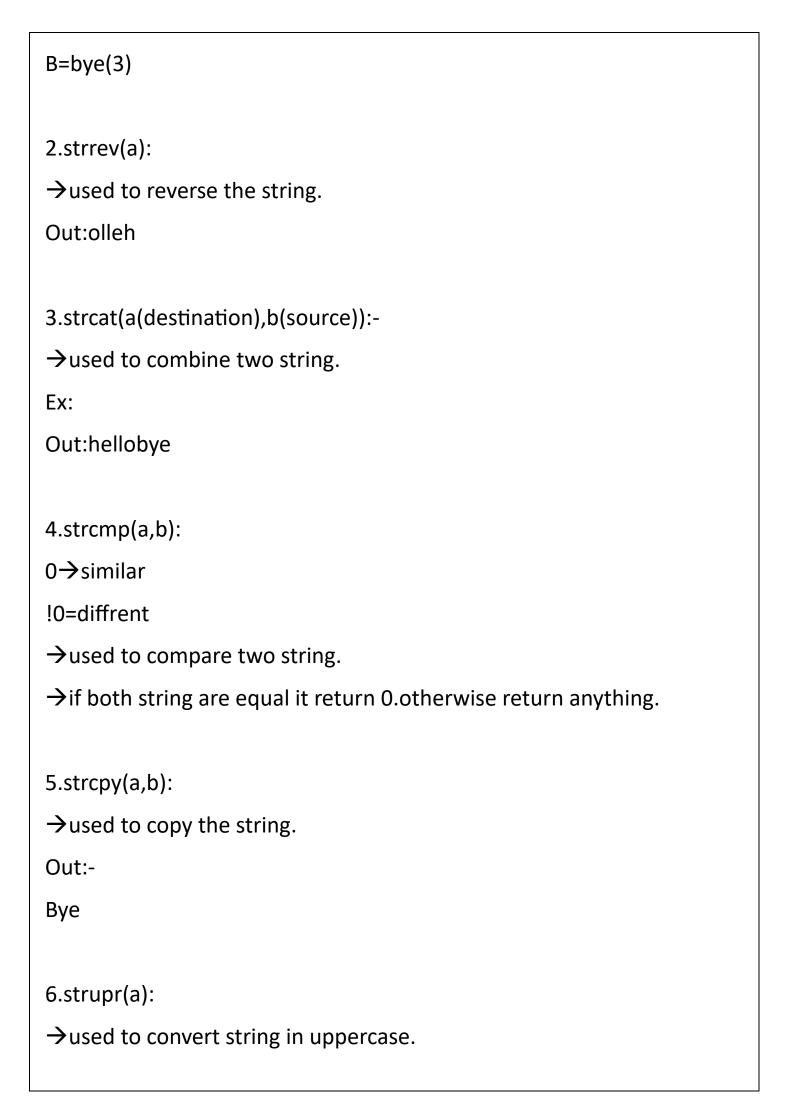

<u>Lecture</u> -19,20,21,22,23,24(date-6,7,9,10,12,13)
2d array
Row=2
Col=3
Sum of 2d array
Squre matrix
Matrix
Table one ni row no gunakar table 2 ni column a one by one digit sate.
Transposed array
Function-4 type
i.with return type with argument
ii.with return type without argument
iii.without return type with argument
iv.without return type without argument.
1.declaration.
2.definition.
3. calling.
Benefit
Height loss and increase reusability.
Pointer-
Address store work.

&--address of

*-- value at

Variable → value of variable

&variable > address of variable **Formsting** %d/%c/%f→value %p→address %d/%c/%f→variable/*pointer $p \rightarrow \text{\&variable/pointer}$. String-sequence of character \rightarrow last character of string is also null('\0'). →formatting==%s Char ch[5] ---> 'tops' Char ch ='a'; String \rightarrow "tops". →function in string: →whenever you want to use the string function in c must write the header file: #include<string.h> i.in-build function ii.user defined function →in build function:-There are total seven in build function: 1.strlen() --- >int →calculate the length of string return number of character with white space. Fx. A=hello(5)

Out:HELLO
7.strlwr(b):
→used to convertsting in lowercase character.
Out: bye.
Most important thing:
All above only two function can return value:
i.strlen()
ii.strcmp()
User defined string function.

→lecture -25(d-14-6-25)

Premitive-one datatype and one element

Int a;

Derived → one datatype but multiple elements.

User defined datatype → multiple datatypes multiple elements

- →structure-struct keyword used to create
- →union-union keyword used to create

file handling

Write-w→new file/existing file overwrite

Read-r--.existing file

Append-a→new file/existing file./add new

Lecture -26(d-16-6-25)

Test

Lecture-27(d-17-6-25)

File handling

Number of student=2

1.add new student
Rollno.
Name.
Percentage.
Grade calculate
Upto 80 =a
Upto 35 and less 80=b
35 less=c
Student-1
Roll.
Name-
Percentage=
Grade
Student-2
Roll.
Name-
Percentage=
Grade
1.add new student
2.display all student
3.display particular student(roll no)
4.update student deails

1.name.	
2.percentage.	
5.delete student.
